

Bonding Eter-Color, Natura, Pictura and Textura with the LijmTec-system

Good cooperation always leads to results! Especially between **Euro Panels**, market leader in fibre cement bonded panels, and **Tweha**, specialist in bonding systems concerning the bonding of façade panels.

For years now, Tweha has been recommending her LijmTec-system for the bonding of the Euro Panels fibre cement bonded façade panels onto an aluminium- or wooden substrates. For some time Euro Panels has been searching for a suitable solution for the bonding of their new two-sided hydrophobated Eter-Color façade panel.

The presented question was clear, but demanding: “find a solution for the bonding of Eter-Color, preferably with a bonding system which is also suitable for the bonding of other façade panels from the Euro Panels scale. And of course KOMO certificated.”

Tweha suited the action to the word and started an extensive analysis, research and product development process.

Tweha ensures with her experience and expertise bonding onto various substrates. Euro Panels is the specialist in façade cladding and has had the knowledge of the technique and behaviour of the fibre cement bonded panels for decennia. Bringing together this knowledge and the research done by Tweha, a suitable solution for the bonding of the above mentioned Euro Panels façade panels is the result. **The ultimate quality of the combination between the LijmTec-system and the Euro Panels façade panels** has been confirmed by additional external testing and durability tests. The KOMO quality certificates specified and achieved per material are a logical consequence!

Experience the advantages of this **innovative breakthrough innovation!**
